

WARUNYU THREEPOOM

DevSecOps & Platform Engineer · AI Agent Platforms

Bangkok, Thailand | warunyu2017@gmail.com | linkedin.com/in/fong-work | github.com/fongvk1237

PROFESSIONAL SUMMARY

AI Platform / DevSecOps engineer building agentic operations and secure delivery systems. Built and operate a multi-agent platform that routes work to team-specific worker, auditor, and Q&A agents, automates Terraform provisioning and Ansible CIS hardening, and verifies changes with live evidence. Also designed an eight-stage GitLab CI/CD pipeline with Cosign, ArgoCD, and Kubernetes.

EXPERIENCE

NETBAY Public Company Limited

2026 – Present

DevSecOps Engineer, Work-integrated Learning Programme (12 months), Bangkok

Agentic Operations Platform

- Built and operate a four-VM multi-agent platform routing approved work across the DevSecOps, database, and network teams (NOC and application engineering planned); Terraform and Ansible automate provisioning and CIS hardening.
- Built a Node.js MCP authorization gateway with per-agent identity, privilege tiers, and server-side tool allowlists; hash-pinned approvals and a 91-item live audit caught two automation defects.

CI/CD & GitOps

- Built an 8-stage GitLab pipeline (13 jobs, about 8.5 minutes) that deploys to Rancher RKE2 through ArgoCD GitOps, so CI holds no cluster credentials.
- Signed and verified every image with Cosign, enforced signatures at admission with Kyverno, and made SonarQube, Trivy and Gitleaks fail the build.
- Ran workloads under restricted Pod Security with NetworkPolicy, PodDisruptionBudget, autoscaling and PreSync database migrations, shipped as Helm charts.

PROJECTS

Home Datacenter | *Personal, in daily use*

2025 – Present

- Run a home NAS my family uses every day (first Proxmox VE, now Debian), with 5 apps published through Cloudflare Tunnel behind a Zero Trust login and admin access over Tailscale.
- Built log monitoring with rsyslog, Promtail, Loki and Grafana alerts (9 log streams, 90-day retention) and attack-tested it from Kali with Nmap and hping3 floods.

Cloud & Edge Honeypot

2026

- Built a Raspberry Pi honeypot with 8 decoy services (Cowrie, OpenCanary, Modbus, fake SCADA) in a segmented DMZ, plus an Azure cloud honeypot for comparison.
- Shipped events to ELK and to Loki/Grafana with Python attack classification, capturing 1,000+ attack events and the commands attackers typed.

SKILLS

Cloud Native: Kubernetes, Rancher RKE2, ArgoCD, Helm, Kyverno, Docker, Linux (Rocky, Debian)

CI/CD & Security: GitLab CI, Harbor, Cosign, Trivy, Gitleaks, SonarQube, CIS Benchmarks, SELinux, Zero Trust

Automation & Code: Terraform, Ansible, VMware vCenter, Proxmox VE, Python, Node.js, TypeScript, PostgreSQL

AI & Observability: Model Context Protocol (MCP), multi-agent systems, LLM evaluation, Grafana, Prometheus, Loki, ELK

EDUCATION

King Mongkut's Institute of Technology Ladkrabang (KMITL)

2023 – Present

Dual degree: B.Eng. IoT System and Information Engineering, and B.Sc. Industrial Physics · GPA 3.02

Training: SoSecure Road to Cybersecurity 2025 (Gen 6), DENSO industrial project on ECU systems and test cases

Languages: Thai (native), English (B1)
